

**ISPM 15** is an [International Phytosanitary Measure](#) developed by the [IPPC](#) that requires wood packaging to be treated to an internationally acceptable standard. Most of Australia's major trading partners, and many developing countries now apply this as a minimum standard for any timber packaging, including pallets and dunnage. Below is a list updated December 2009 of current countries

It is the responsibility of the shipper to ensure that they meet the minimum requirements of their destination country, however some transit countries will also apply these regulations, such as South Africa for transit cargo through Durban, and Singapore will ensure that goods are compliant before sending onto final destination.

An example of a stamp used on pallets to indicate ISPM 15 compliance

\* IPPC certification symbol.

\* XX: represents the two letter ISO country code (e.g. AU for Australia, US for United States, NZ for New Zealand, GB for United Kingdom).

\* 000: represents the unique certification number issued by AQIS to the treatment provider or wood packaging manufacturer. Inclusion of this certification number ensures that the wood packaging material can be traced back to the treatment provider and/or manufacturer.

\* YY: is the treatment abbreviation where:

- HT is the code for heat treatment to a minimum of 56o C for a minimum of 30 minutes
- MB is the code for methyl bromide fumigation.
